

Instructions for Floating Station Signs

Materials (for one bin):

- One 1" wood dowel (could repurpose old broom handle) OR ½ " PVC pipe, cut to 4' length
- Two 1" 2 hole EMT conduit straps (smaller straps could be used if using ½ inch PVC pipe)
- Four ¼ X20 carriage bolts with washers and nuts
- Three wood screws
- One 2X4 cut into 4" square
- Strong tape (packaging or duct), stapler, drill
- Two DSNY cafeteria posters (Landfill, Organics, or MGP)

Instructions:

- Using three wood screws, attach the 2X4 block to the bin 18" from the bottom.
- Using two carriage bolts with washers and nuts, attach the first EMT conduit strap 2 inches above the wood block.
- Attach the second EMT conduit strap 8" above the first strap. Make sure there is enough space between top EMT strap and the top of the can to wrap several trash liners over the rim of the can.
- Cut the broom handle or PVC pipe to the desired length.
- Affix one sign to dowel or pipe using strips of tape.
- Staple the second sign to first so that signage is visible from both sides.
